

Low Transactions Investment Portfolio

LTRIP[©]

Investment objectives

Aims to generate superior returns — typically 3%-5% before investment management fees, above the one-year deposit rate of the reference currency of the portfolio over a business cycle, with less volatility than global equities.

However, there may be extended periods of negative or lower than deposit-rate investment performance. Occasionally the portfolio may even experience a partial loss of the capital and an investor may not get back all of the capital invested.

Stretching back a few decades, major equity markets such as the US and Europe have enjoyed about a 3.5% premium over their risk-free interest rates. Active asset and country allocations may generate higher returns. A portfolio simply growing at only 7% per annum will double in value over ten years.

Description

LTRIP is an individually managed discretionary investment portfolio. It makes mainly long-only investments through Exchange Traded Funds (ETFs) based on global equities, bonds and precious metals. The investment strategy reflects Meltemi's fundamental and technical views of business cycles and medium-term market rhythms. It is expected to have a low transactions volume typically below fifty trades a year.

To enhance investment returns it may sell 'covered call options' and 'put options' on equities and bonds indices or their ETFs.

Structure

The Investment Manager for the LTRIP is Meltemi Investment Management Limited ('Meltemi'), registered with the Financial Conduct Authority (FCA) in the United Kingdom. The principals of the firm have a successful track record spanning over decades of managing funds for wealthy private clients.

We facilitate our clients in opening their accounts at some of the premier international banks, for example Bank Julius Baer & Co. Ltd and VP Bank (Schweiz) AG, Zurich. The bank will act as custodian for the client's assets. The client will grant a power of attorney over this account to Meltemi to buy and sell ETFs, foreign exchange, options and any other financial instruments agreed with the client.

The custodian bank will maintain all primary records of investments and will provide trade confirmations, valuations and any other information about the portfolio directly to the client with a copy to Meltemi for portfolio management purposes. Meltemi will also send a quarterly portfolio review to its clients.

Investment objectives

Capital preservation	Income	Growth/Income	Growth	Aggressive growth
----------------------	--------	---------------	--------	-------------------

1. Asset allocation

We regularly follow macroeconomic fundamentals and market dynamics of more than 30 countries to determine a framework against which we constantly monitor and adjust country and asset allocation. To enhance our own fundamental and technical analysis we also incorporate data and opinions from external sources.

2. Investment guidelines

- Invest in ETFs of major asset classes; equities up to a maximum of 75%; commodities and precious metals up to a maximum of 25%; and the balance in cash and ETFs based on bonds and short-term interest bearing instruments.
- A maximum of 20% of the portfolio in any single ETF.
- Exposure to below investment grade or non-rated bonds based ETFs to a maximum of 40% of the portfolio value.

3. Hedging

Depending on our economic and market views we may partly or fully hedge the non-reference currency exposure of equities and bonds by selling forward FX contracts of the relevant currency by buying 'inverse' ETFs or any other appropriate financial instrument ('the hedge'). The hedge may not exactly match the characteristics of the investment being hedged.

4. Options

We may sell 'covered call options' on ETFs and earn a premium to enhance the returns on the portfolio. We may also sell 'put options' and earn a premium to enhance the returns or to buy ETFs at a cheaper level. The total exercisable amount of 'sold' put options will not exceed 100% of the portfolio value. Also the market value of all outstanding short put options will not exceed 10% of the portfolio value. All options will be 'exchange traded' options.

5. Individual tailored portfolios

We will be happy to tailor a portfolio according to the needs or preferences of a client. For example they may require higher income, higher allocation to equities, commodities related themes or to high-tech. Our small size and 'boutique' nature is an advantage when managing individually tailored portfolios.

Important information

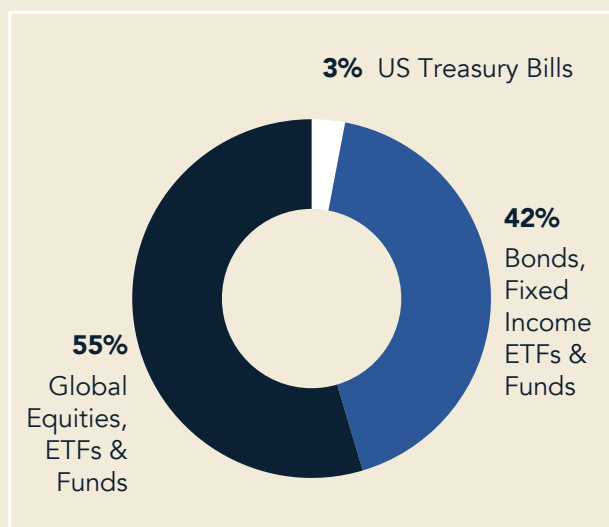

Past performance is not a guide to future results, real results may vary. The value of investments and the income from them can go down as well up. The portfolio may hold investments that are not guaranteed or insured by anyone and are subject to investment risk. An investor may not get back the full amount originally invested.

Exchange rate changes may cause the value of an overseas investment to rise or fall against the reference currency.

Investors should be aware that investment in derivatives, for example, options involves an above average degree of risk due to the geared nature of these instruments.
