

## Objectives

MTRIP (Meltemi Total Return Investment Portfolio) is an individual discretionary investment portfolio, aiming to generate superior absolute investment returns — typically 3–5% above the one-year deposit rate of the reference currency of the portfolio over time, typically over a business cycle. It is designed for balanced-risk tolerant investors aiming for capital appreciation over the medium term.

## Investment strategy

- Invest up to a maximum of 75% of the portfolio in equities, up to a maximum of 25% in commodities & precious metals and in bonds & short-term interest-bearing securities. Investment in these asset classes may be done through suitable Exchange Traded Funds (ETFs).
- A maximum of 20% of the portfolio in any single ETF.
- Exposure to below investment grade or non-rated bonds-based ETFs to a maximum of 40% of the portfolio value.
- Market, currency or credit risk of investments may be hedged from time to time. The hedging instrument/s may not exactly match the characteristics of the exposure.
- Sell exchange traded 'covered call options' and 'put options' on equities to either enhance the yield of the portfolio or to position the portfolio to buy equities at a cheaper level than at the time of selling the 'put-options'. The total exercisable amount of 'sold' put options will not exceed 100% of the portfolio value. Also, the market value of all outstanding short "put options" will not exceed 10% of the portfolio value.

## Individually tailored portfolios

We will be happy to tailor a portfolio according to the needs or preferences of a client. For example, they may require higher income, higher allocation to equities, commodities related themes or to high-tech. Our small size and 'boutique' nature is an advantage when managing individually tailored portfolios.

The composition on the right for December 2024 is representative and not a recommendation and is subject to change without prior notice. Investments may vary between portfolios depending on the time of investment and on our views of the market, liquidity and availability. The above positions are shown as an indication only.
